“ADCATROL” ELECTRO-PNEUMATIC POSITIONERS
PE 986 (ATEX)

DESCRIPTION

The ADCATROL PE986 positioner requires an input signal of 4÷20 mA for proportional control actuator. The positioner compares the output signal from a controller with the position feedback, and varies a pneumatic output signal to the actuator accordingly. The actuator position is therefore guaranteed for any controller output signal and the effects of varying differential pressure.
